

## **AMENDMENTS TO THE CLAIMS**

1. (Currently amended) A device for treating fabrics in a tumble dryer comprising a patch having a front side and a back side, wherein the back side has a ~~means~~an adhesive for attaching the patch to an interior surface of a tumble dryer, wherein the front side is a carrier material that is impregnated with a fabric treatment composition, ~~and~~ wherein the patch is attached to the interior surface of a tumble dryer door or back wall, whereby a portion of the fabric treatment composition is transferred onto fabrics in the tumble dryer as a result of contact between the patch and fabrics during a tumble drying cycle and wherein the fabric treatment composition is present in an amount to be used for multiple tumble drying cycles.
2. (Original) A device according to claim 1 wherein the fabric treatment composition is selected from the group consisting of perfumes, anti-static agents, dye transfer inhibitors, whitening agents, enzymes, stain repellents, insect repellents, sunscreens, malodour reduction or elimination agents, stain removers, and wrinkle reducing agents.
3. (Original) A device according to claim 1 wherein the device has an indicating means which indicates to the user when the device is either low or out of fabric treatment composition.
4. (Cancelled)
5. (Cancelled)
6. (Original) A device according to claim 1 wherein the device is flexible.

7. (Currently amended) A device for treating fabrics in a tumble dryer comprising a patch having a front portion, a middle portion, and a back portion, wherein the back portion has a means on it an adhesive for attaching the patch to an interior surface of a tumble dryer door, the middle portion contains a carrier that is impregnated with a fabric treatment composition, and the front portion contains a flow control member or support member, and wherein the patch is attached to the interior surface of a tumble dryer door back wall whereby a portion of the fabric treatment composition is transferred onto fabrics in the tumble dryer as a result of contact between the patch and fabrics during a tumble drying cycle and wherein the fabric treatment composition is present in an amount to be used for multiple tumble drying cycles.
8. (Original) A device according to claim 7 wherein the fabric treatment composition is selected from the group consisting of perfumes, anti-static agents, dye transfer inhibitors, whitening agents, enzymes, stain repellents, insect repellents, sunscreens, malodour reduction or elimination agents, stain removers, and wrinkle reducing agents.
9. (Original) A device according to claim 7 wherein the device has an indicating means which indicates to the user when the device is either low or out of fabric treatment composition.
10. (Cancelled)
11. (Cancelled)
12. (Original) A method of treating fabrics in a tumble dryer during multiple tumble drying cycles comprising attaching a device according to claim 1 to the inside of a tumble dryer door and carrying out a tumble drying process with fabrics inside the tumble dryer.
13. (Original) A device according to claim 1 wherein the device is flexible.

14. (Original) A tumble dryer with a device according to claim 1.
15. (Original) A tumble dryer with a device according to claim 7.
